Chem. Res. 138:910-936(1993).

-I- FUNCTION: Antibacterial peptide, that adopts an conformation which can disrupt bacterial membras displays a different antimicrobial specificity.
-I- SUBCELLULAR LOCATION: Secreted protein.
-I- TISSUE SPECIFICITY: Expressed by the skin parote

Patent No. 7019194

GENERAL INFORMATION:
APPLICANT: HANSSON, Lennart
APPLICANT: HANSSON, Lennart
APPLICANT: HANSSON, Lennart
APPLICANT: EGELRUD, Torbjorn
TITLE OF INVENTION: SCCE MODIFIED TRANSGENIC MAMMALS AND THEIR USE AS MODELS OF HUMAN
FILE REFERENCE: HANSSON-3A

CURRENT APPLICATION NUMBER: US/10/071,214

CURRENT FILING DATE: 2002-02-11
PRIOR APPLICATION NUMBER: US 60/267,422

PRIOR APPLICATION NUMBER: DK PA 2001 00216

PRIOR APPLICATION NUMBER: DK PA 2001 00216

PRIOR FILING DATE: 2001-02-09

NUMBER OF SEQ ID NOS: 50

SOFTWARE: Patentin version 3.1

WPI; 2004-073743/08.

New antibody specific for carbohydrate-deficient transferrin, useful for diagnosis of alcoholism, can bind its target in solution, eliminating need for immobilization.

Claim 4; SEQ ID NO 3; 21pp; German.

This invention describes a novel antibody that, in aqueous solution, binds selectively to carbohydrate-deficient transferrin (CDT) without having to bind CDT to a solid phase. The invention also describes an antibody that binds selectively to CDT at regions containing the sequences VVARSMGGKEDLIWELL, TTEDSIAKIMNGEADAMSLDGGF, SKLSMGSGLNLSEPN and YEKYLGEEYVKAV (ADG46075-ADG46078) and an immunoassay for detecting CDT using the antibodies of the invention are monoclonal, specifically from hybridomas DSM ACC2540 or 2541. The antibodies are obtained by immunisation with non-glycosylated transferrin, or a fragment, then generation of hybridomas by standard fusion of spleen and myeloma cells. Hybridomas are then selected for

This invention describes a novel antibody that, in aqueous solution, CC binds selectively to carbohydrate-deficient transferrin (CDT) without chaving to bind CDT to a solid phase. The invention also describes an CC antibody that binds selectively to CDT at regions containing the CC sequences VVARSMGGKEDLINELL, TTEDSIAKINMCBADAVSLDGGF, SKLSMGSGLINESEN and CC YEKYLGEEYVKAV (ADG46075-ADG46078) and an immunoassay for detecting CDT cusing the antibodies of the invention. The antibodies of the invention of are monoclonal, specifically from hybridomas DSM ACC2540 or 2541. The CC are monoclonal, specifically from hybridomas DSM ACC2540 or 2541. The CC are monoclonal, or a fragment, then generation of hybridomas by standard cC transferrin, or a fragment, then generation of hybridomas by standard for fusion of spleen and myeloma cells. Hybridomas are then selected for production of spleen and myeloma cells. Hybridomas are then selected for CC phase. The antibodies are useful for diagnosis of alcoholism, CDT, which CC alcoholics. The antibodies allow direct detection of CDT in solution, CC alcoholics. The antibodies and/or Asn 611, is present only in CC alcoholics. The antibodies and of crown for a solid phase (as required when using known antibodies). ADG46075-ADG46094 represent CDT peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Best Local Similarity

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      phase. The antibodies are useful for diagnosis of alcoholism, CDT, whice lacks glycosylation at Asn413 and/or Asn 611, is present only in alcoholics. The antibodies allow direct detection of CDT in solution, eliminating the need for immobilising it on a solid phase (as required when using known antibodies). ADG46075-ADG46094 represent CDT peptide fragments used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New antibody specific for carbohydrate-deficient transferrin, useful for diagnosis of alcoholism, can bind its target in solution, eliminating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 15
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          production of antibodies that specifically bind CDT from the aqueous phase. The antibodies are useful for diagnosis of alcoholism, CDT, \mathbf{w}

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           á
The invention relates to identifying glycopolypeptides in a serum or CC plasma sample comprising immobilizing derivatized sample CC glycopolypeptides to a solid support, releasing the sample glycopeptide (CC glycopeptide fragments that standard peptides, and identifying released sample CC glycopeptide fragments that correspond to standard peptides added by mass spectroscopy. Also included are a method for identifying one or more CC diagnostic markers for a disease, a composition comprising peptides containing the glycosylation sites (AEE35897-AEE39378, where the peptides containing the glycosylation sites (AEE35897-AEE39378, where the peptides containing the same cleavage reagent) and a kit comprising peptides containing the glycopolypeptides (AEE35897-AEE39378). The methods are useful for clearitying glycopolypeptides in a serum or plasma sample. The methods can also be used to identify and/or containing to the glycopolypeptides in a serum or plasma sample of prognostic and containing to the detection of prognostic and contained containing the state of glycopolypeptides in a laso be used to identify and/or containing to the detection of prognostic and contained the state of glycopolypeptides and true drug efficacy, drug dosing, and/or containing the state of glycopolylation of protein sbased on the concurrent contained to protein abundance measurement of protein glycosylation on the same sample. The method allows fast throughput and simplicity. It can be readily adapted for high throughput analysis of samples, which can be gamples. The method allows fast throughput and simplicity. It can be readily adapted for the facilitate the processing of multiple contains and contains also be automated to facilitate the processing of multiple samples. The method allows fast the processing of multiple contains and contains a human glycopoptide that does not
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           S

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match
                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to identifying glycopolypeptides in a serum or plasma sample comprising immobilizing derivatized sample glycopolypeptides to a solid support, releasing the sample glycopeptide fragments from the solid support, adding to the released sample glycopeptide fragments standard peptides, and identifying released sample glycopeptide fragments that correspond to standard peptides added by mass spectroscopy. Also included are a method for identifying one or more diagnostic markers for a disease, a composition comprising peptides containing the glycosylation sites (AEB3587-AEB39378, where the peptides containing the glycosylation sites (AEB3587-AEB39378).
each correspond to peptide fragments derived by cleavage of polypeptides using the same cleavage reagent) and a kit comprising peptides containing the glycosylation sites (ARE35897-ARE33378). The methods are useful for identifying glycopolypeptides in a serum or plasma sample. The methods can be used for blood serum profilling for the detection of prognostic and diagnostic protein markers. It can also be used to identify and/or validate drug targets and to evaluate drug efficacy, drug dosing, and/or drug toxicity. The methods can also be used for the detection of changes in the state of glycosylation of proteins based on the concurrent application of protein abundance measurement of protein glycosylation on the same sample. The method allows fast throughput and simplicity. It can be readily adapted for high throughput analysis of samples, which can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              contain

This invention relates to a novel fusion protein which comprises a transferrin protein exhibiting reduced glycosylation fused to at least one antibody variable region. The invention may be useful for the development of compounds with cytostatic, antibacterial, virucide, antiparasitic, immunosuppressive or antiarthritic activity. In addition, the sequences disclosed may be useful for gene therapy. The fusion protein is useful for preparing a composition for treating a disease or disease symptom in a patient for example septic shock, endotoxic shock, cachexia syndromes associated with bacterial, viral or parasitic infections, neoplasm, autoimmune disease, arthritis or adverse effects associated with treatment for preventing graft rejection. The present sequence is that of a domain of the human transferrin protein which was used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           glycosylation fused to a preparing a composition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New fusion protein comprising a transferrin protein exhibiting reduced glycosylation fused to at least one antibody variable region, useful for

The method can also be automated to facilitate the processing of multiple samples. The present sequence is a human glycopeptide that does not contain an N-linked glycosylation site, suitable for use as a reference peptide in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                             Example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         autoimmune disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention comprises a fusion protein that contains a modified transferrin (Tf) protein fused to a therapeutic protein/peptide (e.g. beta-interferon - IFN, glucagons-like peptide - GLP-1, erythropoietin mimetic peptide - EMP1, T-20 and soluble toxin receptor). The fusion protein of the invention is useful for epitope tagging. The present amino acid sequence represents a fragment of the human Tf protein.

(BIOR-) BIOREXIS PHARM CORP

Example 1; SEQ ID NO 8; 158pp; English.

CC (EPM), comprising a modification of at least one cysteine residue of EPO
CC mimetric peptide (EMP)-1 that substantially reduces disulfide bond
CC formation, and a second modification such that the peptide exhibits EMP-1
CC activity. The first modification such that the peptide exhibits EMP-1
CC activity. The first modification such that the peptide exhibits EMP-1
CC activity. The strength of the comprises the deletion or substitution
CC comprises the addition of a linker group that is covalently bonded to the
CC cherminal amino acid or N-terminal amino acid of EMP-1. EPM peptides of
CC the invention are useful for treating or preventing diseases, such as
CC multiple sclerosis, brain tumor, skin cancer, hepatitis B, hepatitis C,
CC anemia, beta-thalassemia, pregnancy or menstrual disease, such as continuous edisease, inflammatory disease, metabolic disease, obesity,
CC autoimmune disease, inflammatory disease, metabolic disease, obesity,
CC disease, systemic microbial infection, cardiovascular disease, psychosis,
CC genetic diseases, neurodegenerative diseases, disorders of hematopoietic
CC cells, diseases, neurodegenerative diseases, disorders of hematopoietic
CC cells, diseases, inflammatory diseases, asthma, or HIV infections,
CC Alzheimer's disease. The presents sequence represents the C1 subdomain of
CC human transferrin A fusion protein, with increased half life, comprising
CC manutal protein and modified transferrin is used in the course of the The specification describes an erythropoietin (EPO) peptide mimetic (EPM), comprising a modification of at least one cysteine residue o invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   hyperproliferative disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cerebral ischemia, angiogenesis, nervous system disorders e.g. Alzheimer's disease, infections caused by bacteria, viruses and fungi and ocular disorders e.g. corneal infection. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to subburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence represents human transferrin polypeptide. Transferrin polypeptides and polynucleotides are used to prevent, tre or ameliorate a medical condition in e.g. humans mice, rabbits, goat horses, cats, dogs, chickens or sheep. Disorders which are diagnosed treated include autoimmune diseases e.g. rheumatoid arthritis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; transferrin; autoimmune disease; rheumatoid arthritis; hyperproliferative disorder; neoplasm; cardiovascular disorder; cardiac arrest; cerebrovascular disorder; cerebral ischemia; angiogenesis; nervous system disorder; Alzheimer's disease; infection; ocular disorder; corneal infection; wound healing;

cc polynucleotides. The human MEPR polypeptides, polynucleotides and compositions are useful for diagnosing, treating or preventing disorders associated with aberrant expression of MEPR, particularly cell associated with aberrant expression of MEPR, particularly cell cc proliferative disorders (e.g. arteriosclerosis, atherosclerosis, cell providers (e.g. arteriosclerosis, atherosclerosis, cirrhosis, hepatitis, paroxysmal nocturnal hemoglobinuria, polycythemia cc vera, psoriasis, primary thromobocytopenia or cancer), developmental cc disorders (e.g. renal tubular acidosis, anemia or mental retardation), cc neurological disorders (e.g. Alzheimer's disease, parkinson's disease or cepilepsy), autoimmune/inflammatory disorders (e.g. AIDS, allergies, csthmas, autoimmune thyroiditis, contact dermatitis, Crohn's disease, cc diabetes mellitus, glomerulonephritis, Goodpasture's syndrome, gout, Graves' disease, Hashimoto's thyroiditis, irritable bowel syndrome, cmltiple sclerosis, osteoasthritis, osteoporosis, pancreatitis, Reiter's syndrome, rheumatoid arthritis, Sjogren's syndrome, uveitis, or viral, contections, the conding MEPR are useful for creating transgenic animals contections of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       MEPR; metalloprotein; anti-HIV; antiallergic; antiinflammatory; human; antianemic; antiparkinsonian; nootropic; anticonvulsant; cytostatic; antiarteriosclerotic; antiasthmatic; immunosuppressive; antithyroid; hepatotropic; dermatological; antidiabetic; nephrottropic; antigout; thyromimetic; neuroprotective; osteopathic; antiarthritic; uropathic; antiparasitic; antihelmintic; antipsoriatic; ophthalmological; virucide; antiheumatic; haemostatic; antibacterial; protozoacide; fungicide;
